## Abstract of FR2794004

The helmet is constituted of a cap (101) and a collar (107), attached by a mechanical adjusting system (113a,113b) for the helmet to fit the shape of the user's head. The collar is less rigid than the cap so that the helmet can be put on without mishap. The cap supports an optical device which projects images representing pilot information, and a visor (104). A chin strap (112) fixed to the collar holds the helmet on the driver's head.
